

Excel Category 5e

Excel has established itself as a market leader recognised for quality, innovative, yet extremely competitive cabling solutions for copper and fibre optics.

The Excel Brand first appeared on the market in January 1999 and has since gone from strength to strength. Excel offers one of the broadest structured cabling product ranges in the industry.

Category 5e has been widely adopted and is backwards compatible with all previous classes of performance. This means that the accidental use of a Category 5 patch cord will not cause your network to crash.

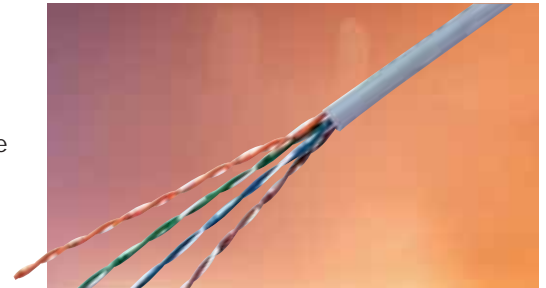

Why Excel Category 5e?

- **Sensible Pricing** – A cost effective solution whilst ensuring your network is top of the range and will be able to support emerging technologies. Each product has been designed with cost, performance, ease of installation and quality in mind.
- **25 year System Warranty** – Once installed and tested, each Excel Cat 5e installation is covered under a warranty programme comparable with any other on the market today. Each component is protected by a quality of manufacture warranty for a 25 year period and the system as a whole covered for all applications designed to operate over a classD link, once again for a 25 year period. The warranty covers support of Gigabit Ethernet.

The Excel range also offers:

- Cabinets & Enclosures
- Fibre Optic Cabling
- Category 6 Structured Cabling
- Voice Cabling Products
- Installation Accessories
