

The J Brand Monthly Green Technology Update

Could you be using Green Technologies to cut costs?

It is the J Brand philosophy to promote “Green Technologies”, particularly when they are able to demonstrate a clear return on investment to clients; one technology that certainly achieves this goal is *powerPerfector*.

90% of UK organisations are using more electricity than they actually need and can be *powerPerfected*.

powerPerfector's Voltage Power Optimisation® (VPO) reduces electricity consumption, costs and carbon emissions, whilst also protecting the electrical infrastructure from poor power quality and spikes.

Is *powerPerfector* suitable for businesses and will it reduce electricity bills?

powerPerfector achieves savings across all types of businesses; offices, manufacturing sites, warehouses, factories, data centres, schools, universities, colleges, leisure centres, shops and call centres.

What are the guarantees that *powerPerfector* will offer an ROI?

powerPerfector's terms and conditions state that for the first installation, they guarantee that the actual savings level will be above 80% of the estimated figure quoted to you on your final cost/value page and in the unlikely event that it is below that figure they will rebate such monies as necessary to restore the 80% of savings figure.

How do I find out more about *powerPerfector*?

To receive additional information, simply click on the link below to receive an info pack on the *powerPerfector* solution and details of the **free evaluation process**.

Issue 4, May 2008

powerPerfector

British energy and *powerPerfector* signed a marketing agreement in January 2008.

“Our partnership with *powerPerfector* provides customers with proven technology that can help them make a real difference.”

Wayne Mitchell, Head of Retail at B.E.

“We have been delighted with the Voltage Optimisation at the Tower of London. Having independently assessed the performance of the technology it was shown to have met the expected savings.”

Tony King, Head of Maintenance and Facilities, Historic Royal Palaces'

Some of the organisations working with *powerPerfector*:
