**REQUIREMENT**

Secure data erasure and recycling of self checkouts

Just over 10 years ago the modern self checkout (SCO) was in development. At that time no one could have foreseen how they would revolutionise our shopping experience. Now we see these devices in all major supermarket chains as well as many other retail outlets. It is estimated that by 2019 there will be over 300,000 units installed worldwide.

Since the early deployment of self checkouts we have seen this technology evolve, now incorporating modern scanning techniques, including 2D, contactless payment, and improved processing speeds.

Canopus Solutions are at the forefront of recycling these units as they are upgraded to the latest models. Our state of the

art erasure tools ensure that all data held on the SCO is securely erased. This ensures compliance with the Data protection act, GDPR legislation, and PCI DSS.

Further to this we fully disassemble the units recovering parts that can be re-used for the maintenance of existing checkouts, or even fed back into the supply chain for refurbishment if it is a part that is still used within the latest models.

Any parts that can no longer be used are then recycled in line with WEEE legislation.

If you would like to arrange a session to discuss further or simply have a concern, query, or requirement, please Contact us:
